FOREWORD

1. *Purpose and Scope*

The *Economic Intelligence Statistical Handbook, 1972* provides statistics on the economies of the Communist countries and selected non-Communist countries. The coverage has been expanded, new tables and graphics have been added, and the format has been revised to make possible more explicit comparisons.

In general, the data in the *Handbook* are for 1960, 1965, 1970, and 1971. A summary table is presented for the European Community, Eastern Europe, and India. The data for Mongolia, because of their scarcity, are presented in a summary table but, in general, are not included in the individual commodity or aggregative tables. The graphics are designed for use as visual aids. Footnotes have been used liberally to give definitions, exceptions, and methodology. Footnotes to the commodity tables give more detailed definitions of the data than those appearing for the commodities on the summary table.

2. *Rounding of the Totals*

The totals have been rounded, with some exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation, and, because of rounding, components may not add to the totals shown. Totals are not presented if missing data are believed to represent a significant part of the total.

3. *Symbols*

The abbreviation *N.A.* (*not available*) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation *Negl.* (*negligible*) is used when the magnitude of the data is less than half of the final unit employed for each table. The metric system is used throughout.

4. *Classification of Data*

The overall classification of the *Handbook* is SECRET/NO FOREIGN DISSEM. The classi-

fied data are indicated by an asterisk (*). Tables in which all of the data are classified have been identified accordingly. *Classified data, however, frequently occur on the reverse of the page, and, therefore, caution should be exercised if pages are removed from this publication.*

5. *Sources*

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for the non-Communist countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), are from unclassified publications of other international organizations or individual countries, or are estimates of this Office.

6. *Terms*

Unless otherwise indicated, the term *Communist Countries* includes the USSR, the countries of Eastern Europe, China, North Korea, North Vietnam, Albania, Cuba, and Yugoslavia; the term *Eastern Europe* includes Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Romania. The term *NATO* includes the United States, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the United Kingdom, and West Germany. The term *European Community* includes Belgium, France, Italy, Luxembourg, the Netherlands, and West Germany. The term *developed countries* includes Austria, Belgium, Denmark, Finland, France, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Norway, the Netherlands, Sweden, Switzerland, the United Kingdom, West Germany, Australia, Canada, Japan, New Zealand, South Africa, and the United States. The term *Organization for Economic Cooperation and Development* includes Greece, Portugal, Spain, Turkey, and all the developed countries, except Liechtenstein, New Zealand, and South Africa. The term *less developed countries* includes the following non-Communist countries:

SECRET

SECRET

(1) all countries of Africa except the Republic of South Africa, (2) all countries of East Asia except Japan, (3) Portugal and Spain in Europe, (4) all countries in Latin America, and (5) all countries in the Middle East and South Asia.

As far as possible, production data for the Saar have been included in the data for West Germany

for all years, unless otherwise indicated. Totals for the country groupings may or may not include all of the countries listed above, depending on the commodity or services listed. Individual non-Communist countries listed under any of the groupings represent major producers only.

^a For the individual European NATO countries, the ratios for converting gross national product (GNP) in national currencies at 1970 prices into 1970 US dollars on the basis of US purchasing power equivalents are derived from the 1950 ratios in Milton Gilbert and Associates, *Comparative National Products and Price Levels*, OEEC, Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1970 by applying the following factor: the derived price indexes for each European country for 1950-70 divided by a derived price index for the United States for 1950-70. These price indexes were derived for each country by dividing the growth of GNP in current prices by the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1970 prices. The total GNP for the European NATO countries is based on the estimate that the total GNP of the individual countries shown represents 95% of the total European NATO GNP.

^b GNP in national currencies converted to US dollars using central exchange rates.

^c GNP in national currencies converted to US dollars using par value exchange rates.

^d Exchange rate as of May 1972.

^e Exchange rate as of April 1971.

^f Par value rate.

^g Including data for West Berlin.

^h Converted at US purchasing power equivalents in approximately the same manner as the data for the EUROPEAN NATO countries.

* An asterisk indicates that the data are classified.

^a Indexes for the non-Communist countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing and mining and, in most countries, public utilities. The indexes for the Communist countries are estimates of this Office—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for the Communist countries include manufacturing, mining, and public utilities.

^b The base year is the year prior to the stated period.

^c Preliminary.

^d Index of gross values for individual commodities and branches aggregated by 1968 value-added weights. The three sectors covered—materials, machinery, and nondurable consumer goods—constitute 50.14%, 30.11%, and 19.75%, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of US industrial production of the US Federal Reserve Board.

^e Estimates of this Office computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production.

^f Based on the midpoint of the range.

^a These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities, as in most Western definitions of industry, but also certain other activities (varying from country to country).

^b The base year is the year prior to the stated period.

^c Rate of growth for 1966-70.

^d Estimated.

^e Socialized industry only.

Table 5
Indexes of Agricultural Production

^a Except for United States, data are from the United States Arms Control and Disarmament Agency. Based on the ratio of military expenditures to gross national product (GNP) at current market prices. Military expenditures are for current and capital expenditures to meet the needs of the armed forces including: expenditures of national defense agencies for military programs; expenditures for the military components of such mixed activities as atomic energy, space, and research and development; military assistance to foreign countries; and expenditures on paramilitary forces where they contribute substantially to a country's military capabilities.

^b Based on the ratio of military expenditures to GNP in constant 1970 prices.

^c Including data for West Berlin.

^d Based on the ratio of military expenditures to GNP in constant 1968 prices.

^e Based on the ratio of military expenditures to GNP in constant 1960 prices.

International Reserves†

Billion US \$

† Including gold and foreign exchange. Data for the non-Communist countries also include Special Drawing Rights and the reserve position in the International Monetary Fund. Data before 1971 for the non-Communist countries are expressed in terms of US dollars at the official par values and, beginning in 1971, reflect the realignment of the exchange rates agreed to on 18 December 1971 and the revaluation of the dollar price of gold.

^a Average of the official state retail price index and the collective farm market price index weighted by their respective shares of retail purchases in 1960. Although the index does not reflect changes in prices of everything purchased by consumers (the official state retail price index does not include costs of housing and most consumer services such as laundry, transportation, recreation, household operation, and communications), the index since 1960 is a good representation of a consumer price index because prices of services were essentially constant during this period.

^b All the indexes are highly suspect—particularly those for East Germany.

^c Estimated.

GNP.....	974.1	530.6* ^b	54*

* An asterisk indicates that the data are classified.

^a US market prices. Total Soviet gross national product (GNP) and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US weighted and Soviet weighted ratios was then used for the conversion of Soviet values into dollars.

The magnitudes for the Soviet end use components were calculated to measure quantity of output compared with the United States but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs. Agriculture alone, for example, used 30% of the labor force, or 38 million people, as a result of the inefficiency of that sector in the USSR.

The adjusted end uses of GNP are defined as follows:

(1) Consumption comprises personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education. (The personal consumption expenditures for the United States are \$615.8 billion.)

(2) Investment is defined (a) for both the United States and the USSR as the sum of expenditures for gross private domestic investment net of inventories; for public construction other than that for defense facilities; for equipment purchased by the government except that for defense; and for defense stockpiling and defense-production expansion; and (b) for the United States, as also including expenditures by state and local government for development of atomic energy. (The gross private domestic investment for the United States is \$135.3 billion.)

(3) Defense as a component of GNP comprises government purchases of goods and services for the military services, federal government expenditures on atomic energy development, and outlays on space research and technology. Defense excludes stockpiling activities and net military grants for foreign military assistance. (The federal government purchases of goods and services for national defense, excluding purchases by NASA, for the United States are \$75.4 billion.)

(4) Other for the USSR includes expenditures on civil space programs, inventory change, administration, net exports, and a statistical discrepancy. Administration includes expenditures on civilian internal security, general agricultural programs, public organizations, government administration, and social welfare. Other for the United States includes administration, net exports and military assistance, change in inventories and stockpiles, and a statistical discrepancy. Administration is the residual left after all current expenditures for national defense, health, education, and all capital expenditures are subtracted from government purchases of goods and services. (There is no equivalent category for the unadjusted data for the United States.)

^b The sum of the end use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values. Nevertheless, the individual end use components were not adjusted to agree with the total, since the US-USSR comparisons shown are believed to give the best available description of relative size.

Other.....	30.9	21.7	5.5
Total.....	71.3	70.6	22.1

^a To achieve as high a degree of comparability as possible, adjustments have been made to the basic data available for both the United States and the USSR. For example, the ruble data, by mission, shown here differ somewhat from the comparable data shown in Table 22. All expenditures for research, development, test, and evaluation (RDT&E) activities associated with military and nuclear energy programs have been aggregated and are included under RDT&E. All expenditures for nuclear warheads have been aggregated and are included under "Other." All expenditures for military assistance and civil defense programs have been excluded.

^b Planned total obligational authority. It should be noted that the pattern of expenditures shown for the United States is not representative of the pre-Vietnam period.

^c These data for the USSR are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The dollar valuations of Soviet expenditures are measures of Soviet programs computed on the basis of US factor costs and do not measure program costs as seen by Soviet planners.

Of which:				
Military machinery	8.9	10.3	13.1	12.9

^a These data are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, the Office of Strategic Research should be consulted to insure that they represent the latest available information. The estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, and military and nuclear research and development activities, but exclude military assistance programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. These estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available during 1971 permitted.

^b Including expenditures for tactical aviation.

^c Including expenditures for naval aviation.

^d Expenditures for research, development, test, and evaluation for all military and nuclear energy programs. Civil space programs are not included. These data include personnel costs for military personnel associated with RDT&E programs. The estimates in this table are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.

^e Expenditures for reserve training, militarized security forces, retirement pay, military space operations, and paramilitary training, in addition to command and support for the active military establishment.

^a Beginning with the official handbooks for 1970, Soviet investment statistics are reported only in constant prices of 1 January 1969 instead of the previous constant prices of 1 July 1955. Consequently the ruble values shown in this table are different from those published in previous editions of the *Handbook*. Unless otherwise indicated, data are from the Soviet statistical handbook *Narodnoye khozyaystvo SSSR v 1970 g.*

^b Estimated, unless otherwise indicated.

^c Preliminary figure given in the 1971 plan fulfillment report (*Pravda*, 23 January 1972, p. 2).

^d Rounded to the nearest hundred million rubles. Values for 1960 were computed from percentage share distributions as reported in the Soviet statistical handbook, *Statisticheskiy yezhegodnik stran-chlenov Soveta Ekonomicheskoy Vzaimopomoshchi, 1971*, p. 171.

^e Excluding the construction industry.

^f Estimated using coefficients of other years calculated as the ratios between investment in prices of 1 July 1955 and prices of 1 January 1969.

^g Computed as a residual; it includes investment in nonferrous metallurgy, timber, paper, wood-working, and miscellaneous other branches of industry.

^a Because of the well-known difficulties in using Soviet established prices as a measure of resource burden, the shares of gross national product (GNP) in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1968 end use weights have been revised from an established price basis to a factor cost basis by subtracting turnover taxes and profits and adding amortization charges, implicit interest costs, agricultural land rent, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant market prices.

^b Preliminary.

^c Civilian research and development and expenditures on capital repair.

Table 27

Estimated Drawings and Scheduled Repayments on Western Credits to the USSR ^a

Million US \$

Year	Estimated Drawings	Scheduled Repayments	Interest	Net Credits	Outstanding at End of Year
1960.....	125	37	2	86	136

1967.....	305	152	29	124	658
1968.....	510	215	38	257	953
1969.....	630	270	57	303	1,313
1970.....	755	326	79	350	1,742
1971.....	835	410	99	326	2,167

^a Estimates of drawings are based on data derived from contracts indicating delivery and credit terms and on Soviet imports of machinery and equipment. In general, early contracts (1960-64) involved 80%-85% credit and 5% interest. A large number of contracts since 1965 have involved 85% credit and 6% interest. Repayment periods for the earlier credits were usually three to five years following downpayment. Typical terms since 1965 have been eight years following delivery of equipment.

^a The Soviet regime recently revalued most of the stock of fixed capital on hand as of 1 January 1972 in investment prices of 1969. The results of the revaluation probably will not be announced until late 1972. In the meantime, the fixed capital series expressed in prices of 1955 continues to be the official series, even though it is not compatible with the new official investment series expressed in prices of 1969 (see Table 24). Value of stocks is estimated as of 1 July of the respective year on the basis of end-of-year data reported in various Soviet statistical handbooks.

^b In 1955 prices (see Footnote a).

^c Preliminary.

^d Including the value of basic herds and draft animals.

^e Nonferrous metals, timber, woodworking, paper, and miscellaneous other branches of industry.

^a The base year is the year prior to the stated period.

^b The official Soviet measure is based on a Marxist concept of national income and differs significantly from the concept used in Western market economies. For example, the Soviet measure excludes the value of services and overstates the contribution of industry by including all indirect taxes.

^c Official "gross" value series.

^d Raw gross output.

^e Unless otherwise indicated, including production of natural gas liquids.

^f Excluding production of natural gas liquids.

^a Except for the terminal year, data are official Soviet statistics. Data for the non-Communist countries are derived as residuals and include exports for which the importing country is not specified.^b Excluding crude oil obtained by the USSR from non-Communist sources and exported to other Communist and non-Communist countries on Soviet account. The quantities involved are estimated to have been 2.5 million metric tons in 1970 and 3.2 million metric tons in 1971.

^a Data are for coal, crude oil, natural gas, and hydroelectric power expressed in terms of coal equivalents (calorific value of 7,000 kilocalories per kilogram), and exclude minor fuels such as peat, shale, and fuelwood.^b The following coefficients were used to convert the sources of primary energy into hard coal equivalents: coal (metric tons), 1.0; brown coal and lignite (metric tons), 0.29; crude oil (metric tons), 1.3; crude natural gasoline (metric tons), 1.5; natural gas (1,000 cubic meters), 1.33; and hydroelectricity (1,000 kilowatt-hours), 0.55. Production of geothermal and nuclear electric power is included at the same ratio as hydroelectricity.^c Including data for Luxembourg.

Other				
Yugoslavia.....	53	330	977	1,151

* An asterisk indicates that the data are classified.

^a Data include only gas from natural gas wells and associated gas from petroleum fields.

^b Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

^c Data for the United States are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste), which would include gas returned to reservoirs in order to maintain horizon pressure would be as follows (in billion cubic meters):

	1960	1965	1970
	411	500	660

^d A much smaller share of total production in the USSR is believed to be used for repressuring.

^e Including gas used for repressuring and gas wasted.

^f Gross production.

^g Production from gasfields only.

* An asterisk indicates that the data are classified.

^a Data are for total (gross) production at generating centers and therefore include transmission losses and station use. (See footnote b.)^b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5% the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.^c Data are for the year beginning 1 April of the stated year.

USSR.....	13,867	31,253	55,400	61,400

^a Soviet production of fertilizer is usually reported as follows: nitrogen fertilizer on the basis of fertilizer containing 20.5% nitrogen, potassium fertilizer on the basis of 41.6% potassium oxide, and most types of phosphorous fertilizer on the basis of 18.7% phosphoric anhydride. In addition, total production includes an insignificant quantity of microfertilizer.

^b Data are based on supply from domestic production given in pure nutrients and recomputed to conform to the Soviet method for expressing production. Data for the United States are "fertilizer years" beginning 1 July of the stated year.

* An asterisk indicates that the data are classified.

^a Data are for the following products, where they are produced: barley, corn, oats, rice, rye, and wheat.

^b Including sorghum for grain.

^c Including miscellaneous grains and pulses.

^d Excluding rice.

^e Including miscellaneous grains.

^f Excluding corn.

^g Including kaoliang, broadpeas, and field peas. Tubers are included on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

^h Including soybeans and tubers on a straight weight basis.

ⁱ Unhusked or paddy rice and corn, expressed in terms of paddy equivalent.

^j Data reflect only rice production and government collections of corn; total production is considerably higher.

^a Unless otherwise indicated, data are for beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 92% of raw sugar by weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.

^b Including cane sugar.

^c Cane sugar only.

^d Including raw cane sugar imported for refining.

^e Raw cane sugar of 96° polarization.

^f Crop years ending 30 June of the stated year.

Yugoslavia.....	Dinar.....	17.0	17.0	16.7	16.7

^a Official rates unless otherwise indicated. These rates are used for converting trade statistics.

^b Rates used for noncommercial transactions such as diplomatic, tourist and student expenditures, personal remittances, and the like. Some countries have special rates for tourists and personal remittances in addition to the noncommercial rate.

^c The unofficial rates actually used in East German accounting of foreign trade transactions. Official rates still listed, but not used, are 2.05 DME to US \$1 and 2.47 DME to 1 ruble.

^d Based on the cross rate of exchange between the won and the Japanese yen.
